SUMMARY

Full stack developer with a backend focus and 9 years of experience in digital media and fintech, now a Development Manager who still ships code. I design microservices architectures (NestJS, Docker, AWS) and have built everything from high-traffic content platforms to regulated investment systems in Ruby on Rails. Exclusively seeking fully remote, full-time positions.

EXPERIENCE

Development Manager · TV Azteca Jul 2025 – Present

- Single-handedly designed and built, in ~3 weeks, 2 middleware services that centralize integration with 2 external service providers, encapsulating credentials and communication complexity, on a new microservices architecture: NestJS, Drizzle, Docker, an AWS SNS/SQS event bus, Fargate deployment, and idempotency, outbox, and resilient-cache patterns.
- Break down complex requirements into simple, actionable tasks and own the team's project planning.
- Safeguard code quality and security through code reviews, version upgrades, task automation, and proofs of concept.
- Coordinate SEO initiatives, third-party service integrations, module development, and optimization of configurable content services.
- Designed the GitLab CI/CD pipelines for the 2 middleware services, a Lambda-exposed event-capture application, and the new content admin, all integrated via APIs.
- Built internal team tooling on my own initiative: GitHub metrics tracking, Google Lighthouse and CrUX (Chrome UX Report) metrics collectors, deploy-change detection on staging servers, automated AMP page validation, and bundle cleanup of unused resources.

Development Lead · Full Stack Developer · TV Azteca Jul 2024 – Jul 2025

- Reduced page weight by splitting the script build according to the dependencies each page actually needs.
- Overhauled the team's workflow: TDD and requirements-format templates, coding standards, code organization, and a testing culture.
- Built reusable modules for generating frontend modules, speeding up the development of new sections.
- Automated recurring tasks with scheduled scripts (cron) and adopted development-environment optimization tooling (OrbStack).

Development Lead · Full Stack Developer · TV Azteca — Fuerza Informativa Azteca (Azteca Noticias) Sep 2023 – Jul 2024

- Built a live-broadcast chat on AWS chat rooms and microservices: a JavaScript client, a Python server/authenticator, and a Lambda for automatic filtering of inappropriate language.
- Designed and deployed a citizen-reporting service: users submit news videos that get published after a validation, filtering, and rebuild pipeline.
- Delivered a 25% improvement in the site's content SEO optimization and contributed to its redesign with new responsive, manageable components.
- Built a content-personalization service for mobile users.
- Refactored numerous modules (visual cleanup and standardization, code reuse) and fixed bugs that had lingered so long on the platform they had become normalized.
- Defined the team's workflow and development guides based on best practices.

Backend Developer · TV Azteca — Baz Jul 2021 – Sep 2023

- Built the migration of content management to an external admin: a Next.js site with a Python backend that unifies content from the corporate CMS and RSS feeds, extracts metadata, and publishes to S3 for better performance.
- Integrated video games into the app in collaboration with an external consulting firm.
- Automated podcast processing: per-provider episode ingestion, compression, and indexing parameterized to the mobile app's needs.
- Restructured the data-capture algorithm consumed by the mobile app, improving performance, adding new metadata, and fixing uniqueness issues.
- Built an AI news-recommendation service (Amazon Personalize) based on each user's preferred categories, and recreated the app's native modules on the web version.
- Orchestrated publishing flows with AWS Lambda, S3, and Amazon EventBridge.

Backend Developer · Play Business Nov 2019 – Jul 2021

- Restructured the investment portfolio (active, canceled, sold, repurchased, and successful investments), including its notifications and transactions.
- Improved payment management for correct visualization and execution across investment and reinvestment flows.
- Built modules for digital signatures, bank data management, contracts, financial accounts, and NPS measurement.

Development & Programming Consultant · Play Business Feb 2019 – Oct 2019

- Developed, integrated, migrated, and tested (field and automated testing) a new calculation model for entrepreneurial users under a multiple-investment-rounds scheme over a single investment vehicle.

Freelance Programmer · Freelance May 2018 – Jan 2019

IT Analyst & Development Engineer · INIF (Instituto Nacional de Investigación y Prevención de Fraude) Feb 2017 – Mar 2018

- Reconfigured server applications to minimize troubleshooting costs and keep versions up to date.
- Centralized the company's information sources and published a SOAP web service that onboarded 2 new partner companies into data exchange with INIF.
- Automated manual processes that caused recurring errors on the main platform and produced application documentation.

SKILLS

Languages: JavaScript, TypeScript, Ruby, Python, Java, Kotlin

Backend: Ruby on Rails, Node.js, NestJS, Spring Boot, Flask, Sidekiq, Sequelize, Drizzle ORM, Hibernate, JWT, Stripe API

Frontend: React, Next.js, jQuery, SASS, CSS, Handlebars, Material Design, SEO, Google Lighthouse, Core Web Vitals, AMP

Databases: PostgreSQL, MySQL, SQL Server, DynamoDB, OpenSearch, Oracle

Cloud & DevOps: AWS, AWS Lambda, API Gateway, SQS, SNS, EventBridge, ECS, ECR, Fargate, S3, EC2, ElastiCache, Redis, RDS, Secrets Manager, Parameter Store, CloudWatch, CodePipeline, CodeBuild, Elastic Beanstalk, Amazon Bedrock, Amazon Personalize, Docker, LocalStack, GitLab CI/CD, CircleCI, CI/CD, Git, GitHub

EDUCATION & CERTIFICATIONS

Bachelor's Degree, Systems Engineering — Universidad Distrital Francisco José de Caldas (2011 – 2017)

AWS Certified Cloud Practitioner (in progress) — Amazon Web Services

PROJECTS

Sommos (APIs, JWT, Payments, AWS Elastic Beanstalk, CI/CD) · **AI service integration** (Amazon Bedrock, Whisper, Prompt engineering, Ruby on Rails, LLM) · **AI video enhancement** (FFmpeg, Real-ESRGAN, AI upscaling, Python) · **Self-hosted media server** (Plex, Jellyfin, Tailscale, Raspberry Pi, FFmpeg, Self-hosting)

LANGUAGES

Spanish (Native) · English (Upper-intermediate (B2))
